SUMMARY

Results-driven Full-Stack Engineer with a BSc in Computer Science from the University of Sheffield and proven experience taking software products from conception to production. Combines enterprise hospitality SaaS engineering at Softinn Solutions (Angular, C#) with solo full-stack product shipping (React Native, Next.js, Supabase, PostgreSQL, Prisma). Specialized in building scalable architectures, secure APIs with Row-Level Security, and fluid cross-platform user interfaces.

PROFESSIONAL EXPERIENCE

Front-End Developer, Softinn Solutions (Hotel SaaS Provider) – Malaysia Feb 2026 – present

- Spearheaded front-end development and feature optimization across a comprehensive suite of hospitality SaaS products (Booking Engine, PMS, CMS, and Hotel Portal) using Angular, Bootstrap, Metronic, and C# backend APIs.
- Engineered responsive, user-centric interfaces resolving complex hotel operational bottlenecks in an Agile Scrum environment.
- Collaborated closely with cross-functional teams to streamline guest reservation workflows and booking conversion funnels.

EDUCATION

University of Sheffield, BSc (Hons) in Computer Science – Sheffield, United Kingdom Sept 2022 – July 2025

- Class: Two Division One Honours (2:1)
- Relevant Modules: Advanced Algorithms, 3D Computer Graphics, Cybersecurity in Action, Internet of Things, Software Testing and Analysis, Robotics, Logic in Computer Science

INTEC Education College, A Levels in Cambridge International A Levels – Malaysia May 2020 – May 2022

- Grades: Computer Science (A*), Mathematics (A*)*, Physics (A*), Further Mathematics (A)

Sekolah Sultan Alam Shah, High School Diploma in Malaysian Certificate of Education (SPM) – Putrajaya, Malaysia Jan 2015 – Sept 2019

- Grades: 6A+, 3A (including GCE O-Level English-1119)

TECHNICAL SKILLS

Programming Languages: TypeScript, JavaScript, Java, C#, C++, Ruby, Python, Embedded C, SQL, Haskell

Web & Mobile Development: React Native, Expo, Next.js, Angular, React, Tailwind CSS, Bootstrap, HTML5/CSS3, Three.js

Backend & Cloud: Node.js, Ruby on Rails, Supabase (PostgreSQL, Realtime, Storage), Prisma ORM, Firebase, Docker, Vercel

Testing & QA: Black-Box & White-Box Testing, Boundary Value Analysis, Test Automation, Jest

Hardware & IoT: ESP32, ESP32-S3, Arduino, NimBLE, PlatformIO, IMU Sensor Integration, Embedded Firmware

FEATURED PROJECTS

Wallo — Real-Time Collaborative Canvas (Google Play Store) 2026

React Native, Expo, Supabase (PostgreSQL & Realtime), Zustand, RevenueCat

- Founded and engineered an interactive collaborative mobile app from scratch to production as sole developer, successfully launching on the Google Play Store.
- Architected the full-stack system with React Native (Expo) and Supabase, implementing real-time multi-client canvas synchronization, cloud image storage pipelines, and granular Row-Level Security (RLS) policies.
- Integrated in-app subscriptions and commercial venue tier monetization using RevenueCat, alongside state synchronization with Zustand for low-latency interactions.

PiYak — Open-Source Full-Stack Health Tracking PWA 2026

Next.js 15, TypeScript, PostgreSQL, Prisma, Clerk, Web Push API, Tailwind CSS

- Architected and open-sourced an ad-free Progressive Web App (PWA) using Next.js 15, TypeScript, PostgreSQL, and Prisma as a private alternative to commercial trackers.
- Engineered relational database schemas and multi-user partner synchronization workflows, enabling real-time secure data sharing between paired accounts with Clerk authentication.
- Built offline-first service worker caching, native Web Push notifications, and automated Vercel Cron jobs to deliver scheduled reminders and client-side statistical analytics.

Interactive Visualization for Graph Theory (Dissertation) 2024-09 – 2025-05

Java, Java Swing, GraphStream, OOP Design Patterns

- Designed and implemented a standalone desktop visualization tool in Java to simulate the k-Pebble Game and 1-Weisfeiler-Leman (1-WL) Graph Isomorphism algorithms.
- Engineered an interactive GUI utilizing Java Swing and GraphStream for dynamic graph rendering, demystifying abstract theoretical computer science concepts.

Software Hut — Client-Facing E-commerce Web Application 2024 – 2025

Ruby on Rails, PostgreSQL, Agile (Scrum/XP), Git

- Engineered and deployed a full-stack e-commerce web platform in an Agile Scrum team collaborating directly with an external commercial client.
- Managed end-to-end software delivery from Software Requirements Specification (SRS) to automated testing and deployment.

GeeyBoard — Couch-Potato BLE & IR Remote Controller 2024

ESP32-S3, C / C++, NimBLE, PlatformIO, Hardware IoT

- Developed custom ESP32-S3 firmware in C/C++ to create a Bluetooth Low Energy (BLE) HID media controller and integrated Infrared TV remote.
- Implemented instant BLE reconnect state management using the NimBLE stack and IR remote protocol decoding for seamless multi-device control.

PORTFOLIO

portfolio.jimiroi.com

- A professional portfolio showcasing engineering projects, technical experience, and interactive digital interfaces built with modern web technologies. Themes are custom made by me. Integrated with AI chatbot and Strava API.
